MVN BHARATH KUMAR

Business Analyst | Data Analyst | Business Intelligence & Process Automation

Hyderabad, India | +91 8106216614 | bharathkumar.jobcareer@gmail.com | linkedin.com/in/bharath-kumar-mvn

PROFESSIONAL SUMMARY

Business Analyst with 5 years across global e-commerce operations, business intelligence and process automation, and an MBA in Business Analytics (BITS Pilani). At Amazon I own the highest-volume queue of customer-facing pricing, promotion and order requests across 15+ international marketplaces, and I build the analytics and automation that run it: a Python operations platform, a multi-region pricing-error dashboard, and pipelines covering ~36,500 requests and ~500 reporting hours a year. Previously the business intelligence analyst for Westpac at Infosys, delivering 15+ Power BI dashboards and owning KPI, audit and workforce reporting for finance, operations and HR. Works day to day with Power BI, Amazon QuickSight, advanced Excel, SQL reporting and Python-based automation, alongside requirement gathering, process documentation and senior-stakeholder communication.

SELECTED ACHIEVEMENTS

- **Prevented an estimated $20M in business impact** on live price-error incidents by identifying affected orders and getting them cancelled before they shipped.
- **Automated ~36,500 requests and ~500 reporting hours per year**, removing a 10–12 hour weekly manual job and an estimated 15% error rate.
- **Delivered 20+ dashboards and internal tools** now used daily by operations teams at Amazon and Westpac; improved forecast accuracy by 30% and cut reporting turnaround by 40%.
- **Resolved 50+ Severity-2 incidents** end to end and notified 400,000+ customers during a single delivery disruption; authored two root-cause reports reviewed by VP-level leadership.
- **Awards:** Innovation & Excellence Award from a Director (Amazon); two client excellence awards and a GEM Recognition from Westpac (Infosys).

KEY PROJECTS

Nexus – Internal Operations Platform (Amazon) | *Python, Flask, SQLite, REST APIs, SharePoint, Slack*

- Designed, built and rolled out a three-module web platform now in daily use by the team, owning requirements, data model, interface and deployment end to end.
- **Shift Handover:** cut the end-of-shift report from 45 minutes to 5, saving 2–3 hours a day across three shifts, with automated report generation and distribution.
- **Live Event Monitoring:** real-time view of every marketplace with automated alerting, replacing hours of manual data pulls.
- **Data Toolkit:** bulk validation, duplicate and data-integrity checks on large files; a multi-hour Excel job reduced to 5 minutes.
- Packaged a self-updating installer so teammates could adopt it without support.

Multi-Region Pricing-Error Analytics Dashboard (Amazon) | *SQL, enterprise data warehouse, Amazon QuickSight*

- **Built end to end as sole owner**: consolidated pricing-error data from every region into a single model that calculates savings and business impact per marketplace automatically.
- Wrote the SQL extracts feeding the dashboard and defined the metric logic directly with the business stakeholders who use the numbers.
- **Impact:** reporting time down from 2–3 hours to ~30 minutes; metrics that were previously impossible to compile manually are now available on demand for 22 months of history.

Automated Request Pipeline (Amazon) | *Python, API automation, file handling, validation rules*

- Built automation that raises ~100 recurring requests a day (~36,500 a year), populating every field and attaching the correct file for each marketplace.
- **Impact:** three routines of 30–45 minutes each now complete in ~10 minutes combined, with manual entry errors eliminated.

Automated Reporting Data Extraction (Amazon) | *Python, SQL, openpyxl, data-quality checks*

- Replaced a 10–12 hour weekly manual extraction with a validated automated pull that completes in under an hour, including built-in accuracy checks.
- **Impact:** ~500 hours saved annually and an estimated 15% error rate removed.

Westpac Business Intelligence Suite (Infosys) | *Power BI (DAX, data modelling), SQL, Excel/VBA, ServiceNow*

- Built and led 15+ dashboards for revenue forecasting, attrition and return-to-office reporting across finance, operations and HR, from requirement gathering to delivery.
- **Impact:** forecast accuracy improved 30%, reporting turnaround cut 40%, and monthly manual packs replaced with live KPI tracking.

PROFESSIONAL EXPERIENCE

Amazon | Business Analyst I **Mar 2025 - Present**

Pricing, promotions, order management and customer notifications across 15+ international marketplaces

- **Own the highest request volume on the team**: price and promotion changes, order replacements, cancellations and price-error cases across 15+ marketplaces, all customer-facing and time-critical.
- **Incident management:** resolved 50+ Severity-2 (major business impact) incidents end to end, and cleared 10+ publishing-system failures in a single quarter alongside my own deadline work – recognised by the requesting business team for managing competing priorities.
- **Stakeholder and requirement work:** coordinated 30+ large promotional events across multiple teams, running detailed requirement reviews with the requesting business teams that surfaced defects before launch instead of after, preventing incorrect prices reaching customers and the refunds and rework that follow.
- **Customer communications at scale:** set up and sent the notifications for regional delivery disruptions, including one event covering 400,000+ impacted customers.
- **Root cause and process:** authored two root-cause reports reviewed by VP-level leadership, and closed a recurring failure by documenting marketplace language support in the team SOP, removing hours of downstream investigation.
- **Repaired the team's automated Slack alerting** after it silently failed, restoring real-time notification of incoming work.
- Train new joiners on the price-error process, resolve the team's escalated process questions, and defined the approach the team now uses for large promotional events.
- **Analytics and tooling delivered in this role:** see Key Projects (Nexus platform, pricing-error dashboard, request and reporting automation).

Infosys | Business Analyst **May 2022 - Feb 2025**

Client: Westpac – business intelligence, governance and workforce analytics

- **Primary client contact for all reporting:** ran requirement-gathering sessions with finance, operations and HR, translated them into dashboard specifications and built the dashboards (see Key Projects).
- Defined KPIs across three business tracks, improving target adherence by 25% by moving from monthly packs to live metrics.
- Ran two internal ISO audits to a 100% pass rate, closed 30+ compliance findings and cut incident reporting time by 40%.
- Built ServiceNow and Confluence dashboards and workflows that reduced reporting turnaround by 40% for finance, operations and HR.
- Automated bonus calculation in Excel, VBA and Power BI, removing the manual spreadsheet step; the workforce analysis raised productivity by 20% and cut overtime cost by 10%.
- Reviewed 50+ contracts a year covering renewals, negotiation support and risk assessment, keeping every agreement compliant with legal and operational standards.

Megha Engineering & Infrastructures Ltd (MEIL) | Junior Engineer **Aug 2021 - Apr 2022**

- Ran production forecasting, material procurement and monthly global savings reporting that showed leadership where cost could be taken out; handled bid analysis, purchase orders and vendor negotiation end to end.

SKILLS

- **Data & Analytics:** SQL (data extraction, reporting queries and dashboard feeds across enterprise data warehouse and PostgreSQL), Power BI (DAX, data modelling, custom visuals), Amazon QuickSight (datasets to dashboards), advanced Excel (modelling, pivot tables, Power Query, VBA), dashboard and KPI design, data visualisation, ad-hoc analysis, data validation and quality control
- **Programming & Automation:** Python, AI-assisted development (Flask web applications, data scripts with pandas and openpyxl, REST API integration – designed, built, tested and shipped using AI coding assistants), VBA, process automation and workflow design, ETL and data-pipeline automation, automated data extraction and validation
- **Cloud & Platforms:** AWS (S3, QuickSight), enterprise data warehouse platforms, SharePoint, ServiceNow, Confluence, Slack, ticketing and workflow systems, Microsoft Office
- **Business & Operations:** Requirement gathering and documentation, stakeholder and senior-leadership communication, business and data analysis, root cause analysis, incident and major-incident (Sev-2) management, pricing and promotions operations, SOP and process documentation, audit and compliance, process improvement, training and onboarding

EDUCATION

MBA, Business Analytics | BITS Pilani, Hyderabad **Jan 2024 - Dec 2025**

B.Tech, Mechanical Engineering | K L University, Vijayawada | CGPA 8.1/10 **May 2017 - Jul 2021**

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals | Microsoft Power BI Developer | SQL Certified Associate | Power BI for Insight Professional | Business Intelligence Associate
